B.E. in Civil Engineering, Stevens Institute of Technology, 1994

EPA's Landfill Methane Outreach Program (LMOP) is a voluntary program designed to encourage the development of landfill gas-to-energy projects. Meg is the LMOP program manager for Territory 2, which includes the mid-western and upper mid-western United States (Colorado, Iowa, Illinois, Indiana, Kansas, Michigan, Minnesota, Missouri, Montana, Nebraska, North Dakota, Ohio, South Dakota, Utah, Wisconsin and Wyoming). These states correspond with EPA Regions V, VII, and VIII.

As a program manager, Meg works to create effective partnerships between the LMOP and states, utilities, landfill owners and operators, communities, and key leaders in the landfill gas industry. Meg also assists landfill gas project development by helping landfills find beneficial end uses for the landfill gas, and by providing technical and marketing assistance at all stages of the development process.

Meg joined the LMOP in 2000. Prior to that she worked in EPA's Stratospheric Protection Division, where she managed the shift from ozone-depleting fire protection chemicals to alternatives that reduce risks to human health and the environment. Prior to joining EPA, Meg was a Staff Engineer at Langan Engineering and Environmental Services, Inc., where she conducted subsurface investigations, prepared geotechnical engineering studies, and performed inspection services for construction activities.
